DAN MATHIESON

Product Manager (Builder) | Agentic AI Systems | Data-Driven Platform Products

danny.mathieson233@gmail.com | danielmathieson.com | linkedin.com/in/daniel-mathieson | San Francisco, CA

PROFESSIONAL SUMMARY

Builder-PM with a track record of shipping production agentic AI systems in high-stakes environments, then making the product decisions that determined what got built next. Drove **63% of net new ARR** at Thoughtful AI during a 3x growth year by owning the full cycle: discovery workshops, pseudo-code specs, eval-engineered testing, and production sign-off. At Smarter Technologies, built a **22-skill, 5-agent platform** that let a 2-person team manage **$31.8M in enterprise pipeline** while shipping 943 commits in 7 months. Deep expertise in nondeterministic model behavior, labeled-holdout eval frameworks, and data-driven iteration loops. Healthcare enterprise depth across 12+ EHR platforms, FHIR, and RCM workflows.

EXPERIENCE

Director, Sales Engineering (Builder PM)

2025 - Present

Smarter Technologies | San Francisco, CA

PE-backed merger of Thoughtful AI, SmarterDx, Access Healthcare, and Pieces. Built the SE function from zero. Owned all product decisions, tooling architecture, and delivery for 62% of new business pipeline.

Agentic Platform Engineering

- Designed and shipped a **production-grade agentic AI platform** from scratch: 22 specialized skills, 5 parallel meeting intelligence agents, 57 Python integration scripts, and 3 CI/CD workflows
- Architected a **multi-agent pipeline** that processed every prospect meeting in parallel across sales, delivery, pricing, product, and design-partnership dimensions simultaneously
- Built an **on-demand demo creation system** that generated complete, prospect-specific demo packages from structured context inputs, cutting production time from 3-4 days to 3-4 hours
- Engineered **bidirectional Notion and Salesforce sync** with automated lifecycle management across 76 prospect workspaces, using Git worktrees as isolated deal environments

Platform-to-Team Deployment and Iteration Loop

- Deployed agent skills via **Claude co-work platform**, packaging slash-command workflows so non-technical team members could invoke AI capabilities without writing prompts from scratch
- Built a **hooks-based usage tracking system**: every skill invocation logged (skill name, input pattern, output), creating a persistent dataset of how the platform was actually used
- Ran a **15-20% feedback sampling loop**: users were prompted for thumbs-up/down or written notes on a fraction of invocations, feeding signal directly back into skill specification iteration
- Led company-wide **agent governance**: defined skill-to-user-group access controls and plugin hierarchy for Claude for Enterprise deployment across the organization

Scale and Impact

- Managed **$31.8M in active pipeline** across 61 enterprise healthcare deals personally, with a 2-person team covering 62% of total company pipeline
- Closed **$1.95M in revenue** including a $1.9M TPA administrator win and a $1M/yr EHR vendor partnership covering 80+ enterprise customers

SMARTER TECHNOLOGIES (LAST 7 MONTHS)

943 Commits
500+ PRs shipped while managing live enterprise pipeline

22 Skills
5-agent platform built from scratch, zero infrastructure

$31.8M
Active pipeline managed by 2-person team

THOUGHTFUL AI (2023-2025)

63% Net New ARR
During 3x YoY growth year

95% Accuracy
Hybrid-RAG in production within 2 days on live workflow

3 Months
To promotion to Lead TPM

TECHNICAL SKILLS

Product & Delivery
Roadmap ownership, Eval-driven iteration, Discovery workshops, Definition of done, Spec writing

Agentic AI
Claude Code, MCP, Multi-Agent Systems, RAG, LLM Tooling, Prompt Engineering

Data & Analytics
Python, SQL, pandas, Jupyter, Tableau, QuickSight, statistical modeling

Languages
Python, TypeScript, SQL, Next.js, React

Healthcare
FHIR, 12+ EHR platforms, EDI/HL7, RCM, Prior Auth, Eligibility

EXPERIENCE (CONTINUED)

Lead TPM / Solutions Architect / Customer Engineer

2023 - 2025

Thoughtful AI | San Francisco, CA

Progressed through 6 roles in 2 years. Healthcare RCM AI automation: eligibility, prior auth, denials, payment posting. Drove 63% of net new ARR during 3x growth year as Lead TPM.

- Made **product prioritization decisions** as Lead TPM: what to build, in what order, at what fidelity, against what constraints. Promoted from TPM within 3 months because I was already doing product work before the title reflected it.
- Built a **MAP (Master Automation Plan) methodology** from scratch: 8-20 hour SOP capture sessions with customers, pseudo-code decision-tree specs that engineers built directly from, customer-signed definition of done before any code was written, personal execution of the testing plan before production sign-off
- Ran on-site **discovery workshops** at Jefferson Health (65,000-employee system) and Presbyterian Health (New Mexico): two-day process mapping sessions with cross-functional teams, producing scoped automation specs with explicit agreement on what would not be built
- Designed a **hybrid-RAG eligibility system** that hit 95% accuracy within 2 days on a live billing workflow. Architecture converged toward determinism over time: human-verified outputs became hard-coded answers, shrinking the LLM inference surface as verified examples accumulated
- Built **eval engineering infrastructure** for every AI system: labeled holdout datasets, precision/recall tracking by failure category, regression test suites that ran before every model or prompt change
- Developed an **end-to-end value realization simulation** in Python: probability distributions across billing workflow stages, Quicksight dashboards per agent translating performance metrics into revenue impact. Used by sales team as core value-proposition framework.
- Stabilized **3x standard implementation load** of struggling accounts during critical growth phase, preventing customer departures through transparent recovery plans and rebuilt stakeholder trust

EARLIER EXPERIENCE

Senior Director, Product Analytics

02/2021 - 10/2022

Action Network | Remote

Consumer Sports Media: Web, iOS, and Android Products

- Built end-to-end **consumer product analytics infrastructure** across web, iOS, and Android: event-level tracking from in-app behavior to downstream revenue events (subscriptions at $10-15/mo, affiliate clicks at $150-300 each with LTV up to $1,000)
- Modeled the **highest-LTV user funnel**: web user to app download to editorial content engagement to affiliate click. Findings directly shaped product roadmap priorities for both content and product teams.
- Created **"Value Clicks"** as company-wide north star metric: measuring post-article user actions predictive of subscription or affiliate activation. Adopted by both the content and product teams as the shared KPI across all roadmap decisions.
- Built affiliate deal financial models evaluating **$500K-$2M partnerships**, including LTV projections using cohort-level retention and loss-rate data from 18 months of referred-user history

Revenue Analyst, G-Suite Finance

01/2020 - 02/2021

Google | Sunnyvale, CA

Cloud-Based Productivity Suite (G-Suite: Docs, Sheets, Drive, Meet)

- Beta-tested new G-Suite features across the full year of tenure, providing product feedback directly to the G-Suite team as an embedded power user and analyst
- Maintained **670 dashboards and P&L statements** for a 0.5B-user SaaS product; interfaced directly with Director and Product leaders on revenue forecasting
- Utilized **Google AI and ML tools** to improve G-Suite top-line revenue forecast accuracy by 7% on average

Manager, Revenue & Forecasting

08/2016 - 12/2019

FanDuel | New York, NY

Consumer Daily Fantasy Sports and Online Sports Betting

- Built a **Markov Chain Monte Carlo simulation** modeling user state transitions across 17 user segments (spend level, sport preference, retention band) to forecast season revenue within 2% error
- Built a **Slackbot knowledge interface** for non-technical stakeholders: triggered Python analytics scripts via natural language, automated daily performance reporting into Slack channels, enabled private metric lookups without requiring SQL access
- Progressed from business analyst to revenue team lead over 3.5 years; taught SQL courses to operations team members seeking direct data access

EDUCATION

B.S. Electrical & Computer Engineering , Bucknell University 08/2012 - 05/2016

AI & Machine Learning Professional Certificate , CalTech / SimpliLearn 10/2022 - 04/2023
