

DAN MATHIESON

AI Workflow Builder | LLM Systems Engineer | Growth Analytics Leader

danny.mathieson233@gmail.com | danielmathieson.com | linkedin.com/in/daniel-mathieson | San Francisco, CA

PROFESSIONAL SUMMARY

I build AI workflows from scratch, then productize them so non-technical teams can run them without me. At Smarter Technologies, I shipped a 5-agent parallel analysis platform and 22 agentic skills using Claude Code, then ported the highest-impact tools to a shared co-work interface so the whole team could invoke them directly. At Thoughtful AI, I built the company's first production RAG system, hit 95% accuracy in two days, and watched the pattern get replicated across three additional automations within a month. Earlier, at Action Network, I built the "Value Clicks" metric that became the company-wide north star, worked weekly with the Chief Content Officer to translate data into editorial strategy, and coached individual writers on SEO and content structure. The throughline: I build the infrastructure, then I make sure real people can use it.

EXPERIENCE

Director, Sales & Solutions Engineering

2025 – Present

Smarter Technologies (acq. by AccessHealthcare) | San Francisco, CA

PE-backed rollup of Thoughtful AI, SmarterDx, and Access Healthcare. Built the SE function from scratch. Retained as one of ~15% of employees after April 2026 shutdown; promoted to VP of Solutions at AccessHealthcare within first month. Personally carried 62% of total company pipeline across 61 enterprise deals.

AI Workflow Platform Engineering

- Architected a **5-agent parallel meeting intelligence pipeline** processing every sales call in real time: each agent handled a distinct lens (discovery scoping, commercial pricing, product feedback, competitive signals, objection handling), routing structured output automatically to product, delivery, and sales leadership
- Built **22 agentic AI skills** as self-contained Claude Code modules (meeting analysis, demo generation, security questionnaire automation, pricing estimation, delivery handoff), then ported the highest-impact skills to a shared co-work interface so non-technical teammates could invoke them directly without writing prompts
- Instrumented a **hooks-based feedback sampling system** logging every skill invocation and prompting users for thumbs-up/down ratings on 15-20% of runs; feedback signal routed directly into skill specification iteration
- Shipped **943 commits and 451 PRs** across 7 months while simultaneously managing live pipeline; built **57 Python integration scripts** connecting Notion, Fireflies, Google Drive, Slack, and GitHub APIs into a unified workflow layer

Enterprise Pre-Sales and Customer Engagement

- Managed **61 simultaneous enterprise deals** across hospital systems, behavioral health, oncology, home health, dental, and specialty medicine; evaluated integration readiness across Epic, Cerner, Athena, NextGen, eClinicalWorks, and 7 other EMR platforms
- Built a **custom demo generation pipeline** that cut creation time from 3-4 days to 3-4 hours by assembling prospect-specific packages from structured context inputs; packaged output templates for reuse across future similar deals
- Closed **\$1.95M in revenue** including a **\$1M/yr EHR vendor ecosystem partnership** (37 meetings, 80+ enterprise downstream customers) and a **\$1.9M health plan win** (4 AI agents across 4 geographic regions)
- Ran on-site **discovery workshops at two large health systems**: Jefferson Health (65,000-employee system) and Presbyterian Health (New Mexico), producing scoped automation specs with explicit agreement on what would not be built

SMARTER TECHNOLOGIES

22

Agentic AI skills built and productized for team use

\$31.8M

Active pipeline run through AI workflow platform

96%

Pre-sales funnel pass-through rate (prospects to proposal)

THOUGHTFUL AI

63%

Net new ARR during 3x year-over-year growth

95%

Hybrid-RAG accuracy in production within 2 days

ACTION NETWORK

270%

Revenue growth in 12 months after Value Clicks launch

TECHNICAL SKILLS

Agentic AI & LLMs

Claude Agent SDK, Claude Code, Multi-Agent Pipelines, RAG, pgvector, Prompt Engineering, Eval Engineering, Tool Use

Workflow Automation

Make/Integromat, Zapier, GitHub Actions, Python Pipelines, Webhooks, Notion Automations, Airflow

Languages & Data

Python, SQL (Redshift, PostgreSQL, BigQuery), TypeScript/JavaScript, Next.js, pandas, Jupyter

Analytics & BI

Tableau, QuickSight, Google Data Studio, Google Analytics, Segment, Chartio

GTM & Project Tools

Notion (admin), Salesforce, Airtable, Linear-adjacent, Google Workspace

EXPERIENCE (CONTINUED)

Solutions Architect / Customer Engineer / Lead Technical Program Manager

2023 – 2025

Thoughtful AI (acq. by New Mountain Capital; merged into Smarter Technologies) | San Francisco, CA

Series A healthcare AI startup. Progressed through 3 roles in 2 years. Promoted to Lead TPM within 3 months. Built the company's first production GenAI system.

- Delivered **63% of company net new ARR** during a 3x growth year: owned the full cycle from scoping through production sign-off, achieving a **96% pre-sales funnel pass-through rate** as the primary technical advisor
- Built Thoughtful's **first production GenAI system**: a hybrid-RAG eligibility verification engine matching free-text coverage limitations to correct billing determinations using OpenAI embeddings and in-context learning; hit over **95% accuracy within two days** on a live workflow; approach replicated across 3 additional automations within a month
- Built a **full eval engineering framework** for every AI system: labeled holdout datasets, precision/recall tracking by failure category, and regression test suites before every model or prompt change; the eval infrastructure was the reason production accuracy held under real-world variation
- Developed a **PRD-as-spec delivery methodology**: 8-20 hour SOP capture sessions with customers, pseudo-code decision-tree specs engineers built directly from, customer-signed definition of done before any code was written
- Built the company's **first customer-facing analytics product** on AWS QuickSight: PostgreSQL queries parsing nested agent execution logs into executive dashboards used in quarterly business reviews
- Stabilized **3x standard implementation load** of struggling accounts during a critical growth phase, preventing customer departures through transparent recovery plans and rebuilt stakeholder trust

EARLIER EXPERIENCE

Senior Director, Data Science & Analytics

02/2021 – 10/2022

Action Network (acq. Better Collective) | Remote

- Created **"Value Clicks"**: a probability-weighted conversion attribution model scoring every on-page user action by likelihood of downstream affiliate activation or subscription, segmented by sport, content type, and state; became the company north star metric and drove **270% revenue growth** in the 12 months following launch
- Embedded with the editorial org as a weekly strategic partner to the **Chief Content Officer**: translated data signals into content prioritization decisions, coached editors on what content mix drove Value Click rates, and worked with individual writers on SEO structure and content strategy
- Built **Airflow-orchestrated data pipelines** on Redshift scraping 80+ partner dashboards; reduced affiliate reporting cycles from weeks to hours across a team of 4 analysts and 3 engineers
- Built **affiliate LTV financial models** evaluating revenue-share deals worth \$500K-\$2M/year with cohort retention, loss rate, and state-level tax modeling; presented directly to CFO and executive leadership

Revenue Analyst, G-Suite Finance

01/2020 – 02/2021

Google | Sunnyvale, CA

- Built a **full P&L transformation suite** in GoogleSQL automatically piping data into executive dashboards consumed by finance leaders across Google Cloud; maintained revenue reporting covering **500M+ SaaS users**
- Improved top-line revenue forecast accuracy by **7%** using Google AI/ML tooling; automated forecast cube generation via Google Apps Script and SAP integration, eliminating manual reporting cycles

Manager, Revenue & Forecasting

08/2016 – 12/2019

FanDuel | New York, NY

- Built the **entire revenue reporting infrastructure** on Redshift SQL: daily retention analysis, LTV segmentation, and bonus targeting; built Chartio dashboards consumed by the full C-suite
- Built a **Markov Chain Monte Carlo simulation** modeling user state transitions across 17 segments to forecast season revenue to within **2% error**
- Built a **Python Slackbot** reducing manual reporting by 40% by putting key metrics directly in the flow of daily operations; designed and taught SQL courses to the operations team

EDUCATION

B.S. Electrical & Computer Engineering, Bucknell University

08/2012 – 05/2016

AI & Machine Learning Professional Certificate, CalTech / SimpliLearn

10/2022 – 04/2023
