

DAN MATHIESON

GTM Strategy & Operations | Revenue Analytics & Forecasting | AI-Powered GTM Infrastructure

danny.mathieson233@gmail.com | danielmathieson.com | linkedin.com/in/daniel-mathieson | San Francisco, CA

PROFESSIONAL SUMMARY

Analytics-first GTM operator with an early career anchored in revenue data and predictive analytics: consumption forecasting at FanDuel (2% revenue error rate, 5x improvement over prior best model), Director of Analytics at Action Network building the Value Clicks north star metric driving 70%+ YoY growth, BigQuery revenue analytics at Google covering 500M GSuite users. At Smarter Technologies, ran RevOps and SE simultaneously across \$250K to \$40M contracts, personally managing 62% of total company pipeline alongside one other person. Deep SQL and Python proficiency with a track record of translating complex analytical work into C-suite recommendations that drive decisions.

EXPERIENCE

VP of Sales & Solutions Engineering

2025 – Present

Smarter Technologies | San Francisco, CA

PE-backed AI rollout in healthcare RCM. Revenue operations function was thin; built GTM infrastructure from scratch while simultaneously managing 62% of total company pipeline across 10+ clinical specialties and 8 product lines.

Revenue Operations & Pricing Analysis

- Ran dual RevOps and SE function for the organization: built deal-specific pricing models incorporating product mix, EMR integration complexity, implementation scope, and multi-year discount structures for contracts ranging from **\$250K to \$40M**; worked directly with VP of Sales and CEO to pressure-test pricing before customer presentations
- Designed **5 pricing architectures** (transaction-based, FTE cost-reduction, fixed+variable hybrid, volume step-down, contingency) and built an automation estimation engine using payer EDI data, EHR scope, and volume modeling to produce defensible ROI projections across **30+ active proposals**
- Built custom Salesforce reports and dashboards surfacing the metrics each stakeholder cared about: pipeline by product line, close probability distributions, stage velocity, and forecasted bookings by quarter; maintained dual-system hygiene between Salesforce (executive visibility) and operational deal database (SE depth)
- Built a Claude Code-based agent that read and wrote directly to Salesforce, surfacing novel pipeline analytics and insights automatically to product, delivery, and sales leadership - eliminating manual reporting cycles and keeping CRM data hygiene in sync with deal activity
- Served as primary cross-functional connector between CEO, two VP Sales, VP Delivery, Product, and Commercial Ops on deal strategy, pricing decisions, and pipeline reviews

Pipeline Analytics & ICP Scoring

- Built ICP scoring framework across **99 enterprise deals** covering 6 weighted dimensions (deal size, EMR readiness, clinical complexity, payer mix, sponsor access, product fit); scored the entire pipeline and used outputs to drive resource allocation and prioritization decisions with the VP Sales team
- Personally managed **\$31.8M in active pipeline** across **61 enterprise deals** (62% of company total); together, a 2-person team owned 100% of pipeline coverage through the deal health, win probability, and stage velocity infrastructure I built and maintained in weekly executive reviews
- Architected a **5-agent parallel meeting intelligence pipeline** that extracted technical requirements, objections, competitive signals, and pricing context from every prospect call, routing structured outputs to product, delivery, and sales leadership; shipped **943 commits and 451 PRs** in 7 months while simultaneously running live pipeline

KEY METRICS: SMARTER TECH

\$31.8M

Active pipeline personally managed (61 deals, 62% of total)

99

Enterprise deals scored in ICP framework (6 dimensions)

30+

Active proposals with Python-built ROI models

KEY METRICS: EARLIER

63%

Net new ARR at Thoughtful AI during 3x YoY growth year

70%+

YoY revenue growth driven at Action Network (north star metric)

2%

Revenue error rate (NFL season): 5x improvement over prior best model

TECHNICAL SKILLS

Analytics & BI

BigQuery / GoogleSQL, Looker, Redshift, QuickSight, Tableau, Chartio, Google Data Studio

Languages & Data Science

Python, SQL, pandas, SciKit Learn, NumPy, Airflow, Google Apps Script

CRM & RevOps

Salesforce (pipelines, custom reports, dashboards, stage tracking), Notion, ICP scoring, pipeline diagnostics

AI & Automation

Claude Agent SDK, Multi-Agent Pipelines, MCP, RAG, LLM Tool Use, Prompt Engineering

Infrastructure

Git, GitHub Actions, AWS, Docker, Next.js, React

EXPERIENCE (CONTINUED)

Solutions Architect / Customer Engineer / Lead Technical Program Manager

2023 – 2025

Thoughtful AI (acq. by New Mountain Capital; merged into Smarter Technologies, Sep 2025) | San Francisco, CA

Series A healthcare AI startup. Progressed through 3 roles in 2 years. Promoted to Lead TPM within 3 months. Drove 63% of net new ARR during a 3x growth year.

- Built the company's **first customer-facing analytics product** on AWS QuickSight: custom PostgreSQL queries including JSON parsing of nested agent execution logs, transforming hundreds of thousands of automation records into executive QBR dashboards that became the primary evidence layer for customer renewals and expansion
- Built a **value realization simulation** in a Jupyter notebook covering the full RCM lifecycle: probability distributions across billing workflow stages, per-agent QuickSight dashboards translating model performance into staff hours saved and denial-protected revenue; became the core value proposition framework used by sales in healthcare CFO and COO conversations
- Delivered **63% of company net new ARR** during a year when Thoughtful grew 3x: owned the full cycle from scoping through production sign-off, achieving a **96% funnel pass-through rate** as primary pre-sales technical advisor
- Built Thoughtful's first production GenAI system: a hybrid-RAG eligibility verification solution achieving **over 95% accuracy within two days** on a live workflow; approach replicated across 3 additional automations within a month and presented to the board
- Stabilized **3x standard implementation load** of struggling accounts during a critical growth phase, preventing a wave of customer departures through transparent recovery plans and rebuilt stakeholder trust

EARLIER EXPERIENCE

Director of Analytics / Senior Director, Data Science & Analytics

02/2021 – 10/2022

Action Network (acq. Better Collective) | Remote

- Led a **4-person analytics team and 3-person data engineering team** building Airflow-orchestrated data pipelines on Redshift, scraping 80+ partner dashboards and reducing reporting cycles from weeks to hours across subscription, affiliate, and advertising revenue streams
- Architected the company's post-acquisition strategic pivot from audience to revenue metrics: built the **"Value Clicks" north star metric** correlating content consumption to downstream affiliate conversion, adopted by both content and product teams as the shared KPI across all roadmap decisions, driving **70%+ YoY revenue growth**
- Built affiliate LTV financial models evaluating revenue-share deals worth \$500K to \$2M/year: cohort-based retention rates, loss rates, deal parameter filters, and state-level tax adjustments; presented directly to CFO and executive leadership to support an eight-figure strategic transition
- Built a 3-5 year state-by-state revenue forecast integrating three sub-models: state legalization to MAU, MAU to affiliate activations, and activations to LTV and revenue; drove **225%+ YoY improvement in revenue per mobile app user**

Revenue Analyst, G-Suite Finance

01/2020 – 02/2021

Google | Sunnyvale, CA

- Built revenue dashboards and P&L statements in **BigQuery/GoogleSQL** covering **500M+ SaaS users**; built a unified executive dashboard with Sales Finance that became the single source of truth across finance leadership, eliminating miscommunication between reporting teams
- Improved top-line GSuite revenue forecast accuracy by **7%** using a machine learning model layered on existing time series infrastructure: PCA-driven feature selection, ARIMA components, integrated into the automated SQL pipeline alongside other data processes
- Automated forecast cube generation using **Google Apps Script and SAP integration**, eliminating manual reporting cycles; built and maintained end-to-end P&L transformation suite in GoogleSQL consumed by finance leaders across Google Cloud

Manager, Revenue & Forecasting

08/2016 – 12/2019

FanDuel | New York, NY

- Built a **Markov Chain Monte Carlo simulation** modeling user-state transitions across 17 segments (spend level, sport preference, retention band) to forecast season revenue with consumption-based cohort logic: high-intensity users generate disproportionate revenue, retention within spending segments determines forecast accuracy; achieved a **2% revenue error rate**, a 5x improvement over the previous best model
- Built the entire revenue reporting infrastructure on Redshift SQL: daily queries for retention analysis, LTV segmentation, and bonus targeting by user propensity; built Looker and Chartio dashboards consumed by the full C-suite
- Built a **Python Slackbot** for automated daily reporting and on-demand metrics via slash commands, reducing manual reporting by 40% and putting key data directly in the flow of daily operations; designed and taught SQL courses to the operations team

EDUCATION

B.S. Electrical & Computer Engineering, Bucknell University

08/2012 – 05/2016

AI & Machine Learning Professional Certificate, CalTech / SimpliLearn

10/2022 – 04/2023
