Applied AI, Industries Team

Anthropic

San Francisco, CA

Dear Anthropic Hiring Team,

The hard part of enterprise AI adoption at scale is not the model capability. It is building the trusted advisory relationship where a VP of Engineering or a Chief Digital Officer will actually restructure how their team works based on what you tell them. That relationship takes a specific combination: deep technical credibility, genuine understanding of how enterprise procurement works, and the ability to make complex AI systems legible to people who won't and shouldn't have to understand the internals. I have spent three years building that combination from inside a forward-deployed delivery org in one of the most regulated enterprise buying environments that exists, and grew from technical engineering roles into a leader in GTM based on my consistent instinct to stay in the customer's frame rather than the product's. I want to bring this mindset to Anthropic's enterprise customers.

At Smarter Technologies, I ran discovery workshops with CFOs, CIOs, and operations leaders at multi-site healthcare organizations. These were not product presentations: they were structured technical conversations that surfaced real adoption blockers (compliance frameworks, data governance gaps, workflow fit questions) and produced specific implementation roadmaps. At one engagement, a 65,000-employee health system, I led two full days of on-site discovery covering Epic integration depth, enterprise data architecture, cost-takeout modeling across clinical and operational workflows, and a multi-year AI adoption roadmap delivered to executive sponsors. At the same time, I was building the AI infrastructure those conversations were about: a multi-agent production platform on Claude Code managing **\$31.8M in active enterprise pipeline**, with pre/post tool-use hooks sampling user feedback on 15-20% of skill invocations (**93% tool approval rating** in the first three weeks of cross-company deployment) and a Cowork deployment with org-level governance covering all operational teams. I was simultaneously the person explaining what the platform could do to enterprise buyers and the person building it. That is the combination Applied AI Architects bring to Anthropic's customers.

My path to that work started at Thoughtful AI, where I learned the most important lesson about enterprise AI adoption. The right technical framing, delivered by the right person in the right moment, with hands-on experience of the acute pain being felt by that enterprise, moves deals that nothing else will. I built Thoughtful's first customer-facing analytics product, parsing agent execution logs into dashboards that became the core GTM sales artifact demonstrating AI observability. Once the CEO and CPO saw how those dashboards changed what was possible in an enterprise sales conversation, they started bringing me into every large deal. **96% of prospects who met with me moved to proposal within a month**, not because of a better pitch, but because I could connect the technology to the specific operational workflows the customer was actually trying to fix.

My personal site runs a production agent built on the Anthropic SDK. It leverages tool use, streaming, and a RAG pipeline grounded in copious amounts of career content I've written. This is the same kind of Claude-native architecture I would be helping enterprise customers design. It is at danielmathieson.com if you want to see it

before we talk! For a review of all the roles I've considered at Anthropic, you can navigate to <https://www.danielmathieson.com/refer/f3a8c1d94e72>.

When Smarter Technologies shut down, I was retained as one of 15% kept and the only non-Product/Engineering person. The PE firm made a specific exception. That happened because I can take genuinely complex AI systems and make them legible to the people who need to adopt them, from a CFO evaluating workflow ROI to an IT security leader reviewing an integration architecture. Vertical expertise matters in that conversation, but the underlying advisory motion transfers across industries. I want to help Anthropic's enterprise customers make that leap. I would welcome the chance to talk.

Sincerely,

Dan Mathieson
