

DAN MATHIESON

Claude Code Platform Builder | Technical Enablement | AI Training & Adoption

danny.mathieson233@gmail.com | danielmathieson.com | linkedin.com/in/daniel-mathieson | San Francisco, CA

PROFESSIONAL SUMMARY

Every role in this career has included a teaching layer: SQL courses built and delivered at FanDuel, Apps Script training designed and taught at Google, coding instruction for kids, and demo coaching rubrics developed for SE candidates at Smarter Technologies. At Smarter Technologies, that instinct was applied to a production Claude Code platform: a **22-skill, 5-agent system** where every skill manifest served simultaneously as configuration spec and onboarding documentation, and pre/post tool-use hooks sampled real usage to drive a **93% tool approval rating** across the first three weeks of cross-company deployment. Retained as one of the 15% kept after an 85% headcount reduction, the only non-Product/Engineering person, specifically because of the ability to take complex AI systems and make them legible to the people who need to adopt them.

EXPERIENCE

VP, Solutions (AccessHealthcare) / Director, Sales Engineering 2025 – Present (Smarter Technologies)

Smarter Technologies / AccessHealthcare | San Francisco, CA

Built SE function from scratch at a PE-backed healthcare AI rollout. After company wind-down in April 2026, retained as one of 15% kept, the only non-Product/Engineering person, and promoted to VP of Solutions at AccessHealthcare (largest portfolio company, multi-billion dollar healthcare RCM BPO) within the first month.

Claude Code Platform & Enablement Infrastructure

- Architected a **22-skill, 5-agent production platform on Claude Code**; every skill was packaged with a **YAML manifest that served as both configuration spec and onboarding documentation**, so the enablement artifact and the platform artifact were the same object from day one
- Implemented **pre- and post-tool-use hooks** to log every skill invocation and sample user feedback on **15-20% of usages**; achieved a **93% tool approval rating** across the first three weeks of cross-company deployment; thumbs-down clusters (e.g., pricing skill with wrong EHR context) fed directly into the next iteration of skill specifications
- Deployed a **unified Cowork skill platform** across all operational teams, sales, GTM, and delivery, using Anthropic's GitHub-based plugin repository system to distribute role-specific skill sets with no prompt-writing required; wrote onboarding documentation that walked users through their first three use cases with concrete examples and zero assumed familiarity with prompting
- Built an **event-driven product feedback pipeline**: a sub-agent injected current Notion roadmap data into every discovery call analysis; a second agent waited for engineering standup pages to be created and auto-populated a market feedback section from that week's field calls, closing the loop between customer conversations and engineering priorities automatically

Enterprise SE Training & Adoption

- Designed **demo coaching rubrics** for SE hiring to evaluate technical communication against real prospect scenarios; manifests from the demo creation system doubled as onboarding documentation for new SE team members, encoding institutional knowledge about how to position each capability
- Delivered **AI adoption walkthroughs to CISOs and IT security leadership** at enterprise health systems; built security questionnaire automation skill covering RFP response from a versioned knowledge base with Git-versioned audit trail; made complex Claude Code architecture legible to non-technical security reviewers in the room
- When team members started Slacking to query the platform agent on their behalf, redesigned **natural language entry points** to eliminate the prompt-writing barrier entirely; documented the redesign pattern as a reusable skill deployment framework

Healthcare Enterprise Pre-Sales

- Managed **61 simultaneous enterprise healthcare deals** across hospital systems, behavioral health, oncology, and specialty medicine; **\$31.8M active pipeline** on a 2-person team; closed **\$1.95M in revenue**

SMARTER TECH (LAST 7 MO)

93%

Cowork skill approval rating across sales, GTM & delivery (15% sampled interactions)

\$31.8M

Active pipeline personally managed (2-person team)

943

Commits / 500+ PRs in 7 months while running 61 live deals

THOUGHTFUL AI (2023-2025)

96%

Pre-sales proposal pass-through rate (made AI legible to buyers)

63%

Net new ARR during Thoughtful's 3x YoY growth year

95%

Hybrid-RAG accuracy on live eligibility workflow (2 days)

SKILLS

Enablement & Curriculum

Workshop Design, Curriculum Development, Demo Engineering, Training Delivery, Feedback Loop Instrumentation, Onboarding Documentation

Claude Code & Agentic AI

Claude Code, Cowork, Subagents, Pre/Post Hooks, MCP, Multi-Agent Pipelines, Prompt Engineering

LLM Development

RAG, pgvector, Eval Engineering, OpenAI Embeddings, Regression Testing

Languages & Tools

Python, SQL, TypeScript, Notion API, GitHub Actions, Git worktrees

Healthcare

FHIR, EDI/HL7, 12+ EMR platforms, HIPAA/BAA, RCM workflows

EXPERIENCE (CONTINUED)

Solutions Architect / Customer Engineer / Lead Technical Program Manager 2023 – 2025

Thoughtful AI (acq. by New Mountain Capital; merged into Smarter Technologies, Sep 2025) | San Francisco, CA
Series A healthcare AI startup building revenue cycle automation agents. Progressed through 3 roles in 2 years. The pattern in every role: build the technical system, then make it legible to the people who need to use it. Promoted to Lead TPM within 3 months. Promoted to Director SE at the merged entity when the sales team requested me full-time.

- Built Thoughtful's **first customer-facing analytics product** on AWS QuickSight, parsing agent execution logs into dashboards used in executive QBRs; product became the core GTM sales artifact; once the CEO and CPO saw how those dashboards changed what was possible in a sales conversation, they started bringing me into every large deal; **96% of prospects who met with me moved to proposal within a month**
- Delivered **63% of company net new ARR** during a year when Thoughtful grew 3x YoY; developed the MAP delivery methodology (8-20 hour SOP capture sessions, pseudo-code decision-tree specs engineers build directly from, customer-signed definition of done before any code is written); this methodology is a structured way of making complex AI workflows legible before a single line is deployed
- Built the company's **first production GenAI system**: a hybrid-RAG eligibility verification solution using OpenAI embeddings and in-context learning; achieved **95%+ accuracy within two days** on live billing workflows; built eval engineering infrastructure (labeled holdout sets, precision/recall tracking by failure category, regression test suites) that made the system auditable and explainable to customers
- Led **on-site discovery workshops** at two large metropolitan health systems (including a 65,000-employee organization); structured 2-day sessions to capture SOP complexity, identify automation ceilings, and produce a definition of done that both customer and engineering teams could sign off on

EARLIER EXPERIENCE

Senior Director, Data Science & Analytics 02/2021 – 10/2022

Action Network (acq. Better Collective) | Remote

- Led a team of 4 analysts and 3 engineers building **Airflow-orchestrated data pipelines** on Redshift; architected the "Value Clicks" north star metric correlating content to affiliate conversion, driving **70%+ YoY revenue growth** and **225%+ improvement in revenue per mobile user**

Revenue Analyst, G-Suite Finance 01/2020 – 02/2021

Google | Sunnyvale, CA

- Built P&L reporting suite in GoogleSQL for 500M+ SaaS users; improved top-line forecast accuracy by **7%** using Google AI/ML tooling; automated forecast cube generation via Google Apps Script and SAP integration; **designed and taught Apps Script training course** to the finance team, pairing the automation with documentation and hands-on instruction so the team could maintain and extend it independently

Manager, Revenue & Forecasting 08/2016 – 12/2019

FanDuel | New York, NY

- Built the entire revenue reporting infrastructure on Redshift; built a **Markov Chain Monte Carlo simulation** forecasting season revenue to within **2% error** across 17 user segments; built a Python Slackbot reducing manual reporting 40%; **designed and taught SQL courses to the operations team**, writing curriculum from scratch to match the team's specific reporting workflows

EDUCATION

B.S. Electrical & Computer Engineering , Bucknell University 08/2012 – 05/2016

AI & Machine Learning Professional Certificate , CalTech / SimpliLearn 10/2022 – 04/2023

INDEPENDENT RESEARCH

Personal Website + Claude Code Agent Platform 2024 – Present

- Built a production AI agent platform at danielmathieson.com using the Anthropic SDK: tool use, streaming SSE, full RAG pipeline with pgvector grounded in career content, multi-model support (Claude, GPT-4, Llama); demonstrates the same Claude Code-native architecture patterns this role would be teaching enterprise developers to build; **943 commits, 500+ PRs** in 7 months of active development
- Designed an **MCP-native clinical data platform** as a technical architecture exercise: read path (FHIR R4 + proprietary payer portals as MCP tools), write path (RPA-backed write-through as MCP tools), consent-check middleware as a first-class interface; wrote architecture docs and investor memos positioning MCP as the agent-tool interface standard for healthcare AI
