Hiring Team

Solutions Consulting

Notion

San Francisco, CA

Dear Notion Hiring Team,

Most Solutions Consultants learn a product and then help customers build with it. I built with Notion first, before it was my job title, and that sequence is the reason I am applying. I have spent the past two years running enterprise AI go-to-market on top of Notion infrastructure I designed myself. The architecture and governance thinking that makes enterprise implementations actually work is not something I would bring to Notion's customers later in my ramp period. It is the work I have been doing.

At Thoughtful AI I served as the company's Notion workspace admin, building the internal tooling the entire team depended on: linked databases for customer accounts and automation plans, filtered views scoped to each function, rollup formulas for project-level visibility, and permission hierarchies that kept engineers, sales, and customer success from stepping on each other. That is not power-user experience. That is the workspace architecture and governance work that enterprise implementations require. When Thoughtful merged into Smarter Technologies and I moved into a Director of Sales Engineering role managing **61 simultaneous enterprise deals across \$31.8M in active pipeline**, I extended that infrastructure into a full GTM productivity system: 76 prospect-specific Notion workspaces with isolated deal environments, automated stage tracking via the Notion REST API, and bidirectional sync to Salesforce across 57 Python scripts I wrote and maintained.

The centerpiece of that system was the **Notion Meeting Intelligence pipeline**: a multi-agent workflow that processed every sales call in real time, extracted structured deal intelligence across five categories (stakeholder map, technical requirements, timeline, risks, next steps), and wrote it directly into the corresponding Notion workspace. Every deal had a living, structured record that was current within hours of the call. I built it because I needed it, and it ran live on a pipeline that included a \$30-40M health system design partnership and closed enterprise deals. That project is the most direct proof I have of what I understand about how enterprises want to use Notion: not as a note-taking app, but as an operating layer that connects their workflows and makes institutional knowledge accessible. When I talk to a VP of Operations about what Notion can do for their team, I am not describing a feature. I am describing what I built for my own team and what it changed.

On the consultative side: I have run the discovery-to-close motion that Solutions Consultants run, at enterprise scale, with buyers who were often skeptical of AI and new to the kind of workflow transformation Notion enables. My prospect-to-proposal conversion rate across those 61 deals was **96%**. I have presented to CIOs, CFOs, and RCM operations directors who needed to understand not just what the product did but what it would mean for their teams operationally and financially. When Smarter Technologies shut down in April 2026, I was retained as the only non-Product or Engineering employee from an 85% workforce reduction and promoted to VP of Solutions at AccessHealthcare within my first month. That outcome reflects what I am actually valued for: making complex technical systems legible to skeptical enterprise buyers. The domain shifts from healthcare RCM to Notion's cross-industry buyer base; the consultative skill transfers directly.

I am in San Francisco, available to anchor in-person, and ready to start mapping Notion's enterprise workspace architecture for customers on day one. I would welcome the chance to talk through what a high-conversion SC motion looks like at Notion's current stage of enterprise growth and what I would focus on in the first 90 days.

Sincerely,

Dan Mathieson
